 Harvest. Declare. Done.

Submitting your Harvest Declaration is now simpler, faster.

From 1 February 2026, a new streamlined Harvest Declaration process starts – no need to report sales volumes or buyer information!

From 1 February 2026, a streamlined, simplified Harvest Declaration (HD) process will be available to growers, minimising paperwork for faster, earlier reporting.

Growers now only need to provide:

- tonnes **unsold from last season** (by variety)
- tonnes **harvested this season** (by variety)
- tonnes **retained for seed** (by variety)

You don't need to submit data related to sales or grain used on farm for stockfeed, saving time and effort.

It means you can do your part of the paperwork sooner after harvest, while it's fresh. Then, once you've finished selling, it's easy to confirm with breeding companies that you're ready to reconcile.

It is still important to accurately record your tonnages by variety across your operations, so that breeding company Royalty Managers can reconcile your account and determine the correct EPR payment amount.

Ensuring you keep accurate production records is crucial to help this simplified process work effectively.

Why we've made the change

This is a step-change in response to grower and industry feedback that parts of the current process are too complex.

Our Members have determined that this is the minimum information they require to reconcile EPR payments, resulting in a significantly simplified process.

In partnership with the National Grower Register (NGR) we've also refined the myNGR online portal, to further improve the experience as you complete your Harvest Declaration.

Participating Breeders

Six of Australia's largest cereal crop breeders are participating in the launch of the simplified HD process, representing 98% of the national winter crop.

For declaring other varieties, please visit the relevant breeder's website for details. Links to all ACB Member websites can be accessed from the Variety Central website home page.

Harvest.

Declare.

Done.

Accessing the new HD system

Using the new system is simple, with full guidance and support available when you first login to the myNGR portal.

The screen will look a little different, but clear navigation and explanations are provided throughout the process.

Several 'How to' videos are available at the Variety Central website, as well as detailed prompts for each part of the submission form.

You can also contact the relevant Royalty Manager for a variety you're submitting to ask for assistance. Their details can be found at: varietycentral.com.au/royalty-managers.

The new, simpler Harvest Declaration process is:

Faster

Complete your HD much sooner after harvest
- no need to wait for or chase up sales records.

Simpler

Less paperwork with fewer details to gather and enter. Declare your harvest in just a few clicks.

Earlier

Get it done now, before you need to concentrate on next season's sowing.

Smoother

Updated, refined online experience on the myNGR platform.

Easier

Focus on keeping good tonnes-by-variety records for production accuracy, which underpins reconciliation and correct EPR payment.

If you have questions

This is a new, better way for growers to provide their Harvest Declaration to six of Australia's largest crop breeders. We are here to help if you have any questions as you go to prepare for and submit your HD.

Detailed information is available on both the ACB and Variety Central websites, including an overview of what documentation you need, frequently asked questions and explanations, 'How to' videos and additional information.

You can also contact NGR for assistance with the form, and the relevant Royalty Manager can assist with other variety-related questions. Visit varietycentral.com.au or australiancropbreeders.com.au to find out more.

Before you start make sure you have the following details **for each variety** you've grown:

Last season:

- Remaining unsold grain tonnes

This season:

- Total tonnes harvested
- Tonnes retained for seed

Remember, we need these amounts by variety.
